

"Exercising to increase your fitness literally builds brand new brain cells. Every time you work out, you are giving your brain a neurochemical bubble bath." [Open this email in your browser](#)

TED THIS WEEK IN IDEAS

[Why your brain loves it when you exercise, plus 3 easy ways to work out at home](#)

Small space? No equipment? Can't make noise? There are still a surprising number of ways to exercise at home — and the benefits you'll gain are real and lasting, says neuroscientist Wendy Suzuki. [Read more »](#)

[62 great books by Black authors, recommended by TED speakers](#)

As we celebrate Black History Month, here's a curated selection of fiction and non-fiction titles to check out now. [Read more »](#)

[Yes, the weather is getting worse — but we're not suffering equally. Here's what we can do](#)

From extreme heat to floods, climate change is hitting poor communities the hardest. As we strive to address carbon emissions, we need to address these inequities too. [Read more »](#)

[The 5 types of mentors you need in your life](#)

Here's how to assemble your personal dream team, with tips from business expert Anthony Tjan. [Read more »](#)

[The lost art of listening](#)

The story of how this politician won over a warlord contains a lesson that we could all learn from, says organizational psychologist Adam Grant. [Read more »](#)
